Muditya Raghav

Backend Developer | Software Development Engineer (SDE I)
+91 8770428132 | mudityadev@gmail.com | Portfolio | LinkedIn | GitHub | LeetCode

Professional Summary

Backend-focused engineer with **1.3 Year at Reliance Jio**, skilled in **Python, FastAPI, Go, REST APIs, and CI/CD**. Built end-to-end backend systems spanning **payment processing, trading analytics, and AI applications**. Seeking **Backend Developer / SDE I** roles.

Technical Skills

Languages: Python, Go, SQL, JavaScript, TypeScript
Backend Development: FastAPI, REST APIs, Express.js, WebSockets, JWT Authentication
Databases & Caching: PostgreSQL, Redis, SQLite, MongoDB, SQLAlchemy, Supabase
DevOps & Tools: Docker, Git, GitHub Actions, Jenkins, Linux, AWS EC2, Postman, CI/CD
Frontend: React, Next.js

Professional Experience

QA Associate Engineer Dec. 2023 – Mar. 2025
Reliance Jio Platforms *Hyderabad, India*

- Developed and maintained automated regression workflows covering **80+ test cases** using AI-assisted tooling, increasing reported test coverage by **40%**.
- Enhanced **REST API validation suites**, identifying and tracking **35+ defects** to improve release quality and system reliability.
- Integrated automated testing into **Jenkins CI/CD pipelines**, contributing to **20% faster releases** and reducing manual regression effort.

Software Engineer Intern Apr. 2022 – Jun. 2022
Persistent Systems *Remote*

- Built a reusable **Python/Pandas** data-validation workflow processing **10,000+ spreadsheet rows** per test, reducing execution time by **90%**.
- Developed automation scripts adopted by **two internal teams**, eliminating repetitive data-verification tasks.

Cyber Security Intern Apr. 2021 – Jul. 2021
Cisco Network *Remote*

- Performed web application security assessments using **Burp Suite and Nmap**; documented vulnerabilities and submitted findings through HackerOne.

Backend Engineering Projects

Kingswork (KingStop) | *Python, FastAPI, SQLAlchemy, WebSockets* Live | GitHub

- Built a **Python/FastAPI backend** for a trading simulation platform, organizing **28 domain routers** under versioned REST APIs with **JWT-based authentication**.
- Implemented **WebSocket updates**, database models, paper-portfolio management, risk-analysis and backtesting workflows, supported by automated tests and CI checks.

Clara Network | *Go, PostgreSQL, Redis, Docker* Live | GitHub

- Developed a **Go-based payment-network simulator** with **ISO 8583** message processing, BIN-based authorization routing, issuer failover, and idempotent transaction handling.
- Implemented an **append-only double-entry ledger**, clearing and reconciliation workflows, and **Redis-backed** transaction risk controls in a Docker-based development environment.

Malcom | *Next.js, TypeScript, Supabase, Stripe* Live | GitHub

- Developed a full-stack **AI research application** with streamed responses, document-grounded answers, web research, and persistent conversation history.
- Implemented **authentication, Supabase-backed data persistence**, session management, and **Stripe subscription workflows**.

Education

Gyan Ganga Institute of Technology and Sciences Aug. 2019 – May 2023
Bachelor of Technology in Information Technology | ***CGPA: 9.02/10*** *Jabalpur, India*
